

CS551 Advanced Software Engineering

In-class exercise: Oct. 4 (T), 2016
Software Architecture

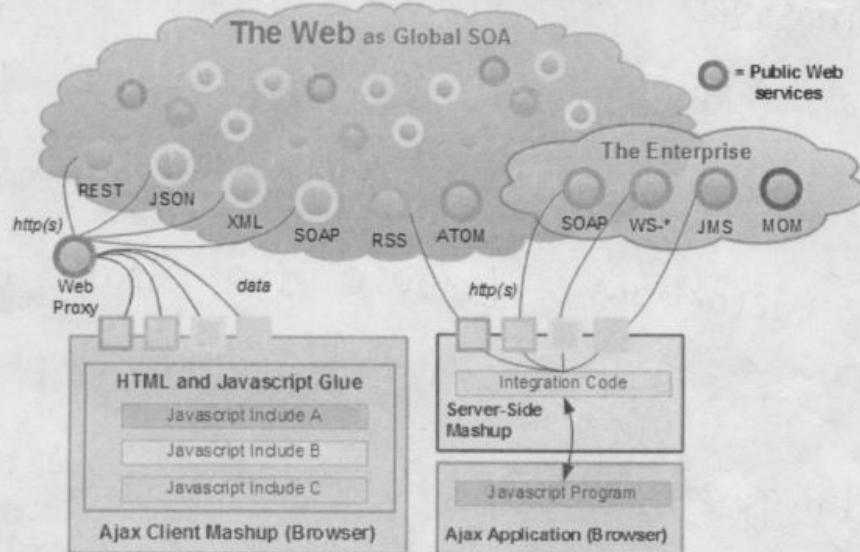

Class ID: 52

Name: Lava Kumar

1. What is a Mashup style?
2. Given the Web Mashup style diagram below, compare and contrast the two mashup styles: Client-side (In-Browser) and Server-side.

Web Mashup Styles

In-Browser | Server-side

CC BY

(1) A Mashup is a new service, that combines functionality or content from existing sources.

(2) Mashups have two typical styles, client side mashup and server side mashup, depending on where the mashup logic is executed. Server-side mashup is similar to traditional web applications using server side dynamic content-generation technologies like java servlets, CGI, PHP or ASP.
